

# Postgraduate Medical Education Adult Infectious Diseases Policy on Policies

May 12, 2022

## Preamble

---

This policy is intended to supplement the existing UBC Postgraduate Medical Education Policy on policies for the adult infectious diseases training program.

## Policy

---

Identification of the need for policy creation/renewal/amendment/removal can occur through either PGME recommendations or through recommendation of the adult infectious diseases residency program committee or subcommittees.

All major program policies are routinely reviewed prior to internal and external program reviews. These reviews occur on an approximately 4-year cycle. Earlier review may occur if requested by program stakeholders including PGME, RPC, program faculty or subspecialty residents.

Draft policies will be brought to RPC for feedback and approval. Policies will be posted and available on the division of infectious diseases website.
